Examiner's Amendment

In the specification, page 1, line 4, after "filed April 10, 2002, " insert –U.S. Patent 6,870,482,--. This miscellaneous amendment was made to reflect the data shown on the Bib Data Sheet.

Allowable Subject Matter

Claims 1-30 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a system for predicting earthquakes. Each independent claim identifies the uniquely distinct features "the first transducer array comprising a plurality of seismometers adapted to detect a plurality of wave movements resulting from dilation of the crust of the Earth prior to an earthquake, detects wave movements and convert the wave movements into a first voltage; a clock to determine the time of the detected wave movements; a first digitizer for converting the first voltage into digital data; a first data transmitter for transmitting digital data and time to the communications interface module and the communications interface module transmits the digital data and time to the data processor for determining the characteristic of the waves; the first transducer array is positioned adjacent to a seismically active region and below the water table", i.e., within the zone of saturation below the surface of the crust of the Earth. The closest prior art, Read et al. (US 4,885,724) and Asada et al. (US 5,412,623) disclose conventional earthquake prediction systems, either singularly or in combination, fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Shuck (US 4,057,780), Silverman (US 4,280,200), Harmon et al. (US 6,885,918), McEvilly (US 4,516,206) and Hocking (US 6,308,135) are cited to show a variety of Seismic recording systems.
